Linkedin: [Antoni Matheus](#)

GitHub: [Antoni Matheus](#)

I am a Full-Stack Developer and UI/UX Designer with four years of experience in web development, API integration, and database management. My expertise includes front-end and back-end technologies, focusing on clean code, maintainability, and responsive design. I have a strong background in Figma for UI prototyping and implementation, and I use Python for business process automation.

Recently, I worked for three months at a design startup (Morfy Digital), where I was responsible for creating graphic materials for events, advertisements, and promotions. I am always eager to learn new technologies and expand my skill set. Check out my projects and portfolio to learn more about my qualifications:
